FINAL REJECTION

The rejections under 35 USC, 112, second paragraph, and Martin (US 6,526,374) are withdrawn in view of the amendments to the claims.

Claims Rejections

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 and 8 are rejected under 35 USC 103 (a) as being unpatentable over Bell US 6,876,239 in view of Staszewski et al (US2002/0033737, S/N=09/838,451).

Bell discloses in Figure 1 and 4E a DLL circuit comprising:

- a delay lines (112) comprising n delay cells (113-0 to 113-N);
- a phase detector (150); and
- a control means (130) having an output coupled to an input of the detector (150).

However, Bell does not disclose that the control means selects inputs at each clock signal and on basis of a control information.

Art Unit: 2816

Staszewski et al suggests in Figure 15 a DLL circuit comprising a control means (multiplexer) for selecting the delay outputs at a clock signal (CRK) and an information from the delay control (1502) for minimizing spurious tones, see the Abstract.

It would have been obvious to a person having skill in the art at the time the invention was made to employ the control circuit and the clock signal as suggested by Staszewski et al in the circuit of Bell for the purpose of minimizing spurious tones.

Allowable Subject Matter

Claims 4-5, 7 and 9-12 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims.

The claims are allowed because the prior art of record does not suggest the sets of switches as combined in claim 4, the control information being a fractional value p/q as combined in claim 7, and the means as combined in claim 10.

CONCLUSION

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 2816

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
